What is MySBfiles?

Stony Brook University provides 500MB of online file storage to all Students, Faculty and Staff. Any files saved on MySBfiles are accessible from any computer with internet access. The files are protected by anti-virus software and are stored on the university's servers. Previous versions of your documents can be retrieved and you can use MySBfiles to host a personal web site.

This document will show you how to access MySBfiles from a Mac on a campus network using the path:

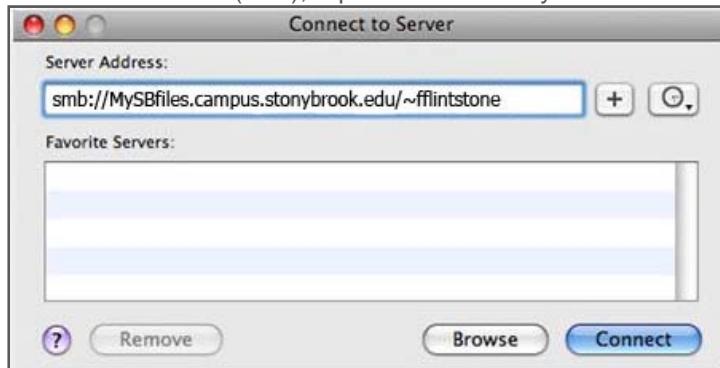

smb://mysbfiles.campus.stonybrook.edu/~NetID

Use this method if you are on a campus network, i.e. Resnet or Airnet. This provides seamless read/write access to MySBfiles. This is the best method to access your files, but will only work from on campus.

1. In **Finder**, click on **Go** and then **Connect to Server**.
2. Type the following path for the **Server Address** and then click **Connect**:

smb://mysbfiles.campus.stonybrook.edu/~NetID

NOTE: After the ~ (tilde), replace *NetID* with your actual NetID

3. You will then be prompted to enter your user name and password. Type in your **NetID** for Name and your **NetID password** for Password.

NOTE: the Name field might already have your name in it. You will need to delete it and put in **sunysb.edu\NetID**

- Once logged in you will see a similar view to the following illustration. Your home directory (MySBfiles) has now been mounted. You can now download, upload, and organize your files.

*once mounted, an icon will appear on the desktop.
