WELCOME TO RESEARCH TECHNOLOGIES

Division of Information Technology

History

To support the Stony Brook research community, the Division of Information Technology developed a new group called Research Technologies to act as a liaison with campus researchers and offer technical expertise and the opportunity to collaborate with a variety of IT leaders and IT partners. It's core mission is to focus on listening, collaborating, developing, and/or integrating technology offerings to those campus community members conducting research.

SUNY Stony Brook is one of four University Centers in the State University of New York system and a member of the prestigious Association of American Universities (AAU), an organization of 60 leading research institutions in the United States and Canada devoted to maintaining strong academic research and education.

What We Do

We are here to help you facilitate, pilot, and support technology so you can focus on your research needs. We offer help with all aspects of technology needs for the grant process from data management plans, vendor relations, liaison with internal IT groups, and the exploration of data storage.

Future Projects

Research Technologies may work to investigate technical aspects, streamline, pilot, and assist with technical requests as they relate specifically to research. This could entail working with an individual researcher or team to understand the technical nature of their research and how information technology could support their goals and objectives.

Research Technologies has a campus-wide technology focus to support multi-disciplinary research initiatives which will hopefully foster future collaboration and shared best practices.

You can DoIt with us, We create Possibilities
