Help guide for Light Engineering
102

(Computer users)
STEP 1

- Locate white control box on front of lectern to operate projector.
STEP 2

- Press “pwr” button, 1st button on left to power up projector. Press button only once! Projector takes 45 seconds – 1 minute to achieve full lamp power (you should get a blue screen).
STEP 3

• Press “VGA/RGB” button until upper right of screen says “computer 1”.

[Image of screen with text: "COMPUTER1"]
STEP 3

• Press “VGA/RGB” button until upper right of projection screen says “computer 1”.
STEP 4

• Connect VGA Cable to input labeled “VGA in” on left side of lectern.
STEP 5

- Connect other end of VGA Cable to laptop computer. NOW turn on computer.
STEP 6

• You should now see your projected desktop image on screen.
STEP 6A

- If no image is displaying, ensure your laptop is outputting a signal by holding down the function key (fn) and tapping the appropriate f key (f1-f12) for your laptop! For Macs, mirror your display images by clicking Apple icon -> System preferences -> Displays -> Arrangement -> Mirror displays.
STEP 7

• At session’s end, disconnect VGA cable and turn off computer.
STEP 8

- Please be sure to turn off projector! To turn off, hold down "pwr" button for 2-3 seconds. If you need additional assistance, please contact our support office at (631) 632-9400.
